

Red HDPE → Natural HDPE Colour Change on Serta 2L Bottles, 3 Parisons

The Process

The turbulent flow of PolyClear HMEX pushes the red colour out

PolyClear HMEX works in the low compression areas of the head, as a result the colour lines are gone and next production can start.

Results

Normal results:

- 600 kg of HDPE
- 8 hours
- Big red chunks of degraded colour coming out later in production

Aquapurge results:

- 100 kg of Poly Clear HMEX first run
 - 1 hour 30 min for this curative action
- Now:
- 60 kg Poly Clear HMEX
 - 1 hour fast colour changes and keeping the head clean
